

ERDHEIM-CHESTER DISEASE

AWARENESS WEEK

SEPT. 11-16, 2017

ERDHEIM-CHESTER DISEASE FACTS

- A life-threatening, rare blood cancer (histiocytic neoplasm) affecting multiple organs.
- Diagnosed via biopsy, scans and clinical symptoms.
- Variable symptoms may include bone pain in legs, bulging eyes, balance issues, excessive thirst, shortness of breath, fatigue, and/or night sweats.
- Most commonly affects adults, but can present at any age.
- ECD research is on the forefront of “precision medicine,” with targeted treatments in the RAS-RAF-MEK-ERK pathway.

Join the ECD Global Alliance community to raise awareness of Erdheim-Chester Disease across the globe.
